Summary

Bachelor of Artificial Intelligence student (**High Distinction, WAM 94/100**) with hands-on research experience running large-scale ML experiments on HPC clusters and benchmarking state-of-the-art models. Strong mathematical foundation in **optimization, linear algebra, and statistics**, with a focus on **graph neural networks** and robust, distribution-shift-aware learning. Comfortable across programming paradigms, modelling stack (PyTorch, scikit-learn) and translating research problems into reproducible workflows.

Full-time internship availability: 19th Oct 2026 – 1st Mar 2027.

Education

Bachelor of Artificial Intelligence

2024 – 2027 (expected)

Deakin University WAM: 94/100

Australia

- AI-related courses: Machine Learning; Robotics, Computer Vision & Speech Processing; Data Wrangling;
- Computational Mathematics courses: Linear & Nonlinear Optimization; Linear Algebra; ; Statistics; Mathematical Modelling; Discrete Mathematics.

Experience

Casual Research Assistant

Apr 2026 – Present

Deakin University

Australia

- Ran and managed ML experiments on **HPC clusters** using the Slurm workload manager, scheduling and monitoring large batches of training jobs.
- Prepared research reports and technical documentation in $\text{\LaTeX}$, ensuring results were reproducible and clearly communicated.
- Supported literature reviews and experimental workflows across active AI research projects.

Projects

Out-of-Distribution Data Fitting

Nov 2025 – Feb 2026

Python, PyTorch, scikit-learn

ADR Summer Project 2025, Deakin University [\[GitHub\]](#)

- Implemented data-splitting techniques that mimic real-world distribution shift to stress-test model generalisation.
- Benchmarked state-of-the-art ML/DL models under distributionally shifted data and analysed robustness trade-offs.
- Summarised findings and reviewed related literature in an academic report.

Linear Programming for Data Science

Jun 2024

Python, SciPy, NumPy

PiMA Research Summer Camp 2024 [\[GitHub\]](#)

- Reformulated regression as optimisation problems, deriving both matrix and linear-programming formulations.
- Built linear-regression models via **L1** (linear programming, SciPy `linprog`) and **L2** (closed-form least squares) approaches.
- Compared error-minimisation strategies (L1 vs L2) for robustness, accuracy, and sensitivity to outliers.

Technical Skills

Languages: Python (pandas, NumPy, scikit-learn, PyTorch, SciPy), C#, SQL.

ML / AI: data wrangling, machine learning, deep learning, out-of-distribution-aware learning, A/B-style benchmarking.

Maths: linear algebra, statistics, mathematical modelling, optimization, discrete mathematics.

Compute & Tooling: HPC clusters, Slurm, Git, Jupyter, Linux, $\text{\LaTeX}$

Awards & Languages

- **Silver Medal**, Informatics — HSGS Olympiad, 2022.
- **Third Prize**, Informatics — Provincial High School Excellence Competition, 2022 & 2023.
- **Encouragement Prize**, Informatics — Central Vietnam & Central Highlands Olympiad, 2022 & 2023.
- **Languages:** Vietnamese (Native), English (IELTS 7.5), Japanese (JLPT N5).
